CONQUER
RESIDUAL INSECTICIDE CONCENTRATE

Water or Oil Dilutable
CONTROLS NUMEROUS PESTS
IN AND AROUND STRUCTURES
RECOMMENDED FOR COMMERCIAL AND INDUSTRIAL USE

For Use In and Around the Home and Food and Non-Food Areas of: Schools, Warehouse, Office Building, Apartment Buildings, Theaters, Hotels, Motels, Kennels, Food Processing Plants, Food Services Establishments, Truck Trailers, Railroad Cars, and Food Manufacturing and Warehousing Establishments. Also for use on lawns to Kill Fleas and Ticks.

ACTIVE INGREDIENTS:
esfenvalerate ................................................. 3.48%

*Contains petroleum distillate

For Use In and Around the Home and Food and Non-Food Areas of: Schools, Warehouse, Office Building, Apartment Buildings, Theaters, Hotels, Motels, Kennels, Food Processing Plants, Food Services Establishments, Truck Trailers, Railroad Cars, and Food Manufacturing and Warehousing Establishments. Also for use on lawns to Kill Fleas and Ticks.

CAUTION
STATEMENT OF PRACTICAL TREATMENT

IF SWALLOWED:
Call a physician or Poison Control Center. Do not induce vomiting.

IF ON SKIN:
Wash with plenty of soap and water. Get medical attention if irritation persists.

IF INHALED:
Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. Get medical attention.

NOTE TO PHYSICIAN:
Probable mucosal damage and danger of aspiration pneumonia may contraindicate the use of gastric lavage.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

ENVIRONMENTAL HAZARDS

This product is toxic to fish, birds and other wildlife. Do not apply directly to water. Do not contaminate water when disposing of equipment washwaters. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluence containing this product into sewer systems without previously notifying the sewage treatment plant authority. For guidance, contact your State Water Board or Regional Office of the EPA.

PHYSICAL OR CHEMICAL HAZARDS

Do not use or store near heat or open flame.

Do not use this product in or on electrical equipment due to the possibility of shock hazard.

DIRECTION FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

CONQUER Residual Insecticide Concentrate can be mixed with an EPA registered insect growth regulator or prethrin-containing product in the areas where these products are allowed to be sprayed. Please check specific label directions of these products before using. Do not tank mix this product with dichlorvos-(DDVP)- containing product.

Do not apply directly to food. Cover or remove all food and food processing equipment during application. After spraying in meat packing plant, bakeries and other food processing plants, wash with an effective cleaning compound and then rinse with potable water all equipment, benches, shelving, etc. where exposed food will be handled. In the home, all food processing surfaces and utensils should be covered during treatment or thoroughly washed before use. Cover exposed food. Do not spray plants used for feed.

Do not allow children or pets to contact treated surfaces until spray is dried.

Do not apply to classrooms while in use. Do not apply in institutions (including libraries, sports facilities, etc.) in the immediate area where occupants are present.

SHAKE WELL BEFORE USE

FOR INDOOR PESTS:

GENERAL: Use CONQUER Residual Insecticide Concentrate to control the pests indicated in the listed areas as a contact spray by mixing either one (1) or two (2) fluid ounces of concentrate in one (1) gallon of water or oil and mix thoroughly before use. One (1) ounce of concentrate per gallon of water or oil will make a spray containing .027% active ingredient, two (2) ounces per gallon will make a spray containing .05% active ingredient. For initial clean out of heavy infestations use two (2) ounces of concentrate per gallon of spray; for maintenance control or light infestations use one (1) ounce concentrate per gallon. When using oil as the diluent, an odorless light petroleum hydrocarbon as defined by CFR Title 21, sec. 172.884 should be used for all food area and food related applications. For all applications of contact sprays use at the rate of one (1) gallon (diluted spray) per 1,000 square feet of surface area.

Application Only Within Food and Non-Food areas of Food Service and Handling Establishment (Places Other Than Private Residences) including, But Not Limited To: Restaurants, Grocery Stores, Bakeries, Food Manufacturing and Processing Establishments, and Food Warehousing Establishments. Do not treat establishments where livestock feed is present.

Food areas include areas for receiving storage, packing, canning, bottling, wrapping, boxing, preparing, edible waste storage and enclosed processing systems, mills and dairies. Serving areas are places where prepared foods are served, such as dining rooms, but excluding areas where foods may be prepared or held. Non-food areas include garbage rooms, lavatories, floor drains to sewers, entries and vestibules, offices, locker rooms, machine rooms, boiler rooms, garages, mop closets and storage after canning or bottling.

KEEP OUT OF REACH OF CHILDREN

STATEMENT OF PRACTICAL TREATMENT

IF INHALED:
Probable mucosal damage and danger of aspiration pneumonia may contraindicate the use of gastric lavage.

IF ON SKIN:
Wash with plenty of soap and water. Get medical attention if irritation persists.

IF SWALLOWED:
Remove victim to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. Get medical attention.
To kill the accessible Stages of Granary Insects: Rice Weevils, Confused Flour Beetles, Rust Red Flour Beetles, Saw-Tooth Grain Beetles, Caddelles, Meal Moth Larvae and Adults, Tobacco Beetle, Drugstore Beetles, and Granary Weevils: Apply a coarse wet spray to surfaces where these pests are normally found, such as floors, baseboards, around walls, benches, and pieces of equipment. Use at a dosage of one (1) gallon of spray per 1,000 square feet. Pay particular attention to cracks, crevices, and similar protected locations in floors and walls. Spray thoroughly and under floor drains, non-food conveyors, and other areas where other granary insects may be found. Do not apply when food processing facility is in operation or foods are exposed. Do not apply this spray to surfaces or utensils that may come into contact with food; excess residues in food may make the product inedible. Repeat Application as Needed, but Do Not Exceed More Than One Application Every Fourteen (14) Days.

To Kill Ants, Centipedes, Cockroaches, Crickets, Earwigs, Millipedes, Psocids, Scorpions, Silverfish, Sowbugs, Spiders, and Waterbugs: Apply this spray with a sprayer that produces coarse, wetting droplets into all cracks and crevices in woodwork, furniture, underneath sinks, areas behind pipes, and in all places where these insects use. Use a dosage of one (1) gallon of spray per 1,000 square feet. Contact as many insects as possible with direct spray. Repeat application as needed, but do not exceed more than one application every seven (7) days and similar food service establishments or more than one application in every fourteen (14) days in all types of food handling establishments. As a Space Spray.

To Kill Houseflies, Mosquitoes, Gnats And Small Flying Moths: Close room and shut off all air conditioning or ventilating equipment. For space spray applications use a maximum of ten (10) ounces of concentrate diluted in one (1) gallon of oil to make a 0.25% spray. Use diluted spray in a mechanical aerosol fogger or generator which produces particles of aerosol size thirty (30) microns, or less. Direct spray into all cracks and crevices behind all equipment, cabinets, and fixtures. Prior to treatment, make sure all birds and adults are covered and birds, such as canaries, removed from the area. Do not permit humans or pets to contact surfaces until the spray has dried. Repeat as necessary. Do not treat establishments where livestock feed is present.

To Kill Ants, Centipedes, Cockroaches, Crickets, Earwigs, Millipedes, Psocids, Scorpions, Silverfish, Sowbugs, Spiders, and Waterbugs: Spray areas where pests are found or may hide, including dark corners of rooms and closets, cracks and crevices in walls, behind baseboards and door and window frames where these pests may be present. For control of ants, thoroughly spray into cracks & crevices, through openings or small newly drilled holes into wall voids where these pests are suspected. Drugs driven out of hiding places should be sprayed directly. For Ants, apply to ant trails also around doors and windows where these pests may find an entrance. Repeat as necessary.

To Kill Brown Dog Ticks and Fleas: Thoroughly apply as a spot treatment to infested areas such as a pet beds and resting quarters, nearby cracks and behind baseboards, windows and door frames and localized areas of the floor and floor coverings where these pests may be present. For control of fleas, thoroughly apply a fine particle broadcast as shown in the table below. Direct spray into all cracks and crevices behind all equipment and appliances, cupboards, or any dark harborage area. This treatment will control the sprayed termites and will not protect the structure from which the swarm is coming. Use only a contact spray to kill emerging reproductive (winged) and worker termites emerging from infested wood.

To Kill WOOD DESTROYING TERMITES: OUTDOORS ONLY: Use two (2) fluid ounces of concentrate per gallon of water and apply as a coarse, wetting spray when swarming termites are emerging from wood piles, wooden frames, wooden structures, or from the ground. Swarming usually occurs during the spring or at other times when a termite colony becomes overcrowded and new reproductive termites with wings emerge and fly away to mate and establish new colonies. This treatment will control the sprayed termites and will not protect the structure from which the swarm is coming. Use only a contact spray to kill emerging reproductive (winged) and worker termites emerging from infested wood.

KEEP FLEAS AND TICKS HARBORING IN LAWNS AND BACKYARDS: For power sprayers dilute and apply as shown in the table below. For best results, lawn should be mowed a day or two before spraying. Spray using a slow, even sweeping motion, being sure to cover the entire lawn surface where the pests will normally frequent. Spray under ornamentals and trees, but avoid spraying near fish ponds or other bodies of water. Avoid soaking young or flowering plants.

LAWN FLEA AND TICK CONTROL: As a Spot Treatment. Spray areas where fleas are normally found, including dark corners of rooms and closets, cracks and crevices in walls, behind baseboards and door and window frames where these pests may be present. For control of ants, thoroughly spray into cracks & crevices, through openings or small newly drilled holes into wall voids where these pests are found or may hide. Do not spray near fish ponds or other bodies of water. Avoid soaking young or flowering plants.

Building Perimeter Treatment: To help prevent infestation of buildings by ants, crickets, spiders, centipedes, and sowbugs (pillbugs) treat a 12-18 inch band of soil or other substrate adjacent to building foundation to a height of 2 to 3 feet where these pests are active and may be found. Use two (2) fluid ounces of concentrate per gallon of water and apply as a coarse wet spray at the rate of one (1) gallon per 1,000 square feet. TO KILL EXPOSED/SWARMING TERMITES: OUTDOOR USE ONLY. Use two (2) fluid ounces of concentrate per gallon of water and apply as a coarse, wetting spray when swarming termites are emerging from wood piles, wooden frames, wooden structures, or from the ground. Swarming usually occurs during the spring or at other times when a termite colony becomes overcrowded and new reproductive termites with wings emerge and fly away to mate and establish new colonies. This treatment will control the sprayed termites and will not protect the structure from which the swarm is coming. Use only a contact spray to kill emerging reproductive (winged) and worker termites emerging from infested wood.

To Kill WOOD DESTROYING TERMITES: OUTDOORS ONLY: Use two (2) fluid ounces of concentrate per gallon of water and apply as a coarse, wetting spray to exposed wood, and to damaged areas of wood, spraying into galleries or tunnels in the exposed wood. Also spray around drywood termites, window and door frames, cabinets and around garbage cans, plumbing and other utility installations. Pests driven out of hiding places should be sprayed directly. For Ants, apply to ant trails also around doors and windows where these pests may find an entrance. Repeat as necessary.

DO NOT USE ALKALINE Absorbers or clean area of spill with alkaline detergents. Net contents - 16 Ounces. Manufactured For Paragon Professional Pest Control Products 3635 Knight Road, #7 Memphis, TN 38118 Storage: Store in a warm, dry place. Keep container closed. Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at a permitted waste disposal facility. In case of spill or leak, soak up with sand, earth, or synthetic absorbents. Do not use alkaline absorbents or clean area of spill with alkaline detergents. Do not reuse empty container. Wrap container in several layers of newspaper and discard in trash.
